

Science Ambassadors

"The important thing is not to stop questioning. Curiosity has its own reason for existence. One cannot help but be in awe when he contemplates the mysteries of eternity, of life, of the marvellous structure of reality. It is enough if one tries merely to comprehend a little of this mystery each day."

- Albert Einstein

Who Are They?

The Science Ambassadors are made up of children from across school. The Ambassadors work closely with the Strategic Lead for Science within school to support the monitoring of teaching and learning. They provide valuable feedback, clearly identifying strengths and areas for development.

What They Do?

At St. Aloysius Catholic School, we believe the teaching and learning of Science is key to understanding the world around us and to help prepare our children for the future.

Our Science Ambassadors have the job of working closely with the Science Lead to encourage and share the love of science across the school.

How They Make A Difference?

The Science Ambassadors meet regularly with the Science Leader. They also collate evidence gained from Science lessons taking place around school, to support the achievement of the school's Science Awards, whilst rewarding other children for their efforts within Science lessons.

They help to plan the Science Week in school and come up with ways to make science fun.

They also help the children to understand the difference between Chemistry, Physics and Biology through quizzes and assemblies.

Striving for Excellence, Inspired by Gospel Values
